

- Q1** An angiospermic plant has following characteristics. Identify the type of pollination in it.
P. The pollen grains are light and non-sticky
Q. Presence of feathery stigma
R. Nectaries absent
S. Flowers have well exposed stamens
(A) Entomophily (B) Hydrophily
(C) Anemophily (D) Ornithophily
- Q2** A dioecious flowering plant prevents both:
(A) Autogamy and xenogamy
(B) Autogamy and geitonogamy
(C) Geitonogamy and xenogamy
(D) Cleistogamy and xenogamy
- Q3** Inbreeding depression can occur in case of all **except**:
(A) cleistogamous flower.
(B) autogamy.
(C) xenogamy.
(D) chasmogamous flower.
- Q4** Outbreeding devices tend to promote;
(A) Autogamy
(B) Xenogamy
(C) Self pollination
(D) Inbreeding depression
- Q5** **Assertion (A):** Cross pollination may produce superior offspring.
Reason (B): Transfer of pollen grain from the flower of one plant to the stigma of another flower and of a different plant is called cross pollination.
(A) Both Assertion (A) and Reason (R) are true and Reason (R) is a correct explanation of Assertion (A).
(B) Both Assertion (A) and Reason (R) are true but Reason (R) is not a correct explanation of Assertion (A).
(C) Assertion (A) is true and Reason (R) is false.
(D) Assertion (A) is false and Reason (R) is true.
- Q6** Protandry is a condition in which:
(A) anthers mature after stigma
(B) anthers and stigma mature at the same time
(C) anthers mature earlier than the stigma
(D) pollens of the same flower pollinates stigma
- Q7** Incompatibility in plants refers to:
(A) The inability of a flower to develop into a fruit
(B) The inability of two flowers to cross-pollinate
(C) The inability of two different plant species to reproduce
(D) The inability of pollen to germinate on the stigma of the same flower
- Q8** Self incompatibility:
(A) Prevents cross pollination
(B) Allows pollen grains of other flowers of the same plant to fertilise the ovule
(C) Is a genetically controlled mechanism
(D) Does not allow the germination of pollen grains of other species on the stigma
- Q9** Which of the following labelled parts of gynoecium determines the compatible nature of pollen?

- (A) P (B) Q
(C) R (D) S

- Q10** Pistil accepts the pollen and promote post pollination event, when pollen is-
- incompatible
 - from same species and are self incompatible
 - from other species
 - from same species
- Q11** What does the filiform apparatus do at the entrance into the ovule?
- It brings about opening of the pollen tube
 - It guides pollen tube from a synergid to egg
 - It helps in the entry of pollen tube into a synergid
 - It prevents entry of more than one pollen tube into the embryo sac
- Q12** The events in pollen-pistil interaction are given below
- Pollen grain germinates to form pollen tube.
 - Pollen tube enters the ovule through micropyle.
 - Pollen grain reaches the stigma.
 - Pollen tube grows through the tissues of stigma and style and reaches the ovary.
- The sequential order of their occurrence is
- (iii) → (i) → (iv) → (ii)
 - (ii) → (iv) → (iii) → (i)
 - (iii) → (iv) → (ii) → (i)
 - (ii) → (iii) → (i) → (iv)
- Q13** Identify *A* to *F* in the given diagram.

- (A) A-Pollen tube, B-Ovary, C-Ovule, D-Antipodal cell, E-Pollen grain, F-Polar nuclei
(B) A-Polar nuclei, B-Antipodal cell, C-Ovule, D-Ovary, E-Pollen tube, F-Pollen grain
(C) A-Pollen grain, B-Pollen tube, C-Ovary, D-Ovule, E-Antipodal cell, F-Polar nuclei
(D) A-Antipodal cell, B-Ovule, C-Ovary, D-Polar nuclei, E-Pollen grain, F-Pollen tube

- Q14** Emasculation not required during artificial hybridisation when flower is;
- unisexual
 - cleistogamous
 - bisexual
 - sterile
- Q15** Artificial hybridisation is one of the major approaches of crop improvement programme. For the bisexual flower it includes the following steps in correct sequence.
- Bagging, pollination, rebagging
 - Pollination, bagging, rebagging
 - Emasculation, bagging, pollination, rebagging
 - Bagging, emasculation, pollination, rebagging
